                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present sequence is that of complementarity determining region CC 3 (CDR3) of the heavy chain of an antibody expressed by mouse typicidoma 193/K2. This antibody has anti-Factor IX (FIX) or anti-activated factor IX (FIXa) activity. It is an example of anti-fIX/FIXa antibodies of the invention. Such antibodies and their derivatives (including those that comprise the present CDR3 peptide) have Factor VIIIa (FVIIIa) cofactor activity or FIXa peptide) have Factor VIIIa (FVIIIa) cofactor activity or FIXa derivatives leads to an increase in the procoagulant activity of FIXA, even in the presence of FVIII inhibitors. This allows for the case of FVIII inhibitor patients. The antibodies or their cannot be case of FVIII inhibitor patients. The antibodies or their case of the case of a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially to haemophilia A and haemorrhagic diathesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

```
The present sequence is that of a single chain Fv (scFv) derivative CC of antibody 193/K2, comprising the heavy (VH) and light (VL) chain CC variable regions of 193/K2 joined by an artificial, flexible linker CC peptide. The scFv was obtained by FCR amplification of cDNAs for CC an example of anti-human Factor IX (FIX)/activated Factor IX (FIXa) and example of anti-human Factor IX (FIX)/activated Factor IX (FIXa) CC antibodies of the invention. Anti-FIX/FIXa and their derivatives, CC including scFv and CDR3 fragments, have Factor VIIIa (FVIIIa) cofactor CC activity. or FIXa activating activity. Administration leads to an CC increase in the procagulant activity of FIXa, even in the presence CC in the absence of FVIII or FVIIIa, and in the case of FVIII (C) inhibitor partients. The antibodies and derivatives are used in a CC claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic

Kaposi's sarcoma associated herpes virus (KSHV) clone KS5 (AAT16806), obtd. from a KS lesion genomic library, includes 15 complete ORFs and 2 incomplete ORFs (AAT16807-23) named according to their herpesvirus saimiri positional homologues. The major capsid protein (AAR93601) is the product of ORF25 (AAT16807). KSHV proteins and peptides may be obtd. by incorporating encoding sequences into a vector and expression in host cells. They are useful in vaccines or for raising antibodies of diagnostic or therapeutic value. (Updated on 25-WAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                           18-AUG-1994;

AAH84373 to AAH84499 represent Escherichia coli growth and proliferation CC related DNA sequences (I). AAH84500 to AAH84670 encode the E. coli CC growth and proliferation related proteins given in AAG99993 and AAG98830 CC to AAG98999. (I) can be used as potential targets for the generation of interact with the gene products of (I). In addition the expression of CC interact with the gene products of (I). In addition the expression of CC used to generate reagents and screen small molecule libraries or other CC used to generate reagents and screen small molecule libraries or other CC candidate compound libraries for compounds that can be further developed to yield novel antimicrobial compounds. In addition, nucleic acid probes CC microorganisms can be used to identify particular microorganisms species of CC microorganisms can be used to identify particular microorganism species in clinical specimens, therefore, providing a rapid and dependable CC infection. Also, antibodies generated agents of a bacterial CC infection. Also, antibodies generated agents of a bacterial CC infection also antibodies generated agents of a bacterial compounds. In a second probes considers used in the isolation of E. coll growth and proliferation constituted sequencing which are used in an avamenta from the process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    RESULT 5

                                                                                                                                                                    CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymucleotides are also used in diagnostics as expressed sequence tage for identifying expressed genes. (I) is useful in gene therapy techniques CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical commanding of sites expressing (II). (II) are useful for treating classing of sites expressing (II). (II) are useful for treating classing of sites expressing (II). (II) are useful for treating classing of sites expressing (II). (II) and (II) are useful for treating classories involving aberrant protein expression or biological activity. (II) and (III) are useful for treating classories involving aberrant protein expression or biological activity. (II) and (III) are useful for treating classories in polymucleotide sequences have applications in classories in the prince classories biodiversity and to produce other types of data and products dependent on DNA and conditions of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8

                                                                                                                                                                    CC The invention relates to an isolated polynucleotide (I) comprising a CC nucleotide sequence selected from any of 948 sequences CC (ABZ11119-ABZ12066) or their mature protein coding portion, active domain CC coding protein or complementary sequences. The polynucleotides are useful CC for identifying expressed genes or for physical mapping of human genome. CC The encoded polypeptides (ABBC68902-ABBC6849) are useful as molecular CC weight markers, as a food supplement, for generating antibodies, in CC medical imaging, screening and diagnostic assays and for treating CC cell-proliferative disorders (cancer), neurodegenerative diseases (Multiple CC sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid CC disorders, platelet or coagulation disorders, wound, burns, incision, CC ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, CC parasitic), arthritis, etc.

Note: The sequence data for this patent did not form part of the printed CC specification, but was obtained in electronic format directly from WIPO CC at fro wire. Int/mih/inihi and not segmences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ

The invention relates to isolated polynucleotide (I) and (I) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The polynucleotides are also used in disposetics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques (II). (II) is useful for generating antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating clisorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed CC specification, but was obtained in electronic format directly from WIPO CC at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S

This invention describes novel nucleic acid (cDNA) sequences (A) which C have anticancer activity and are highly expressed in ovarian tumor Ct tissue (and some also in testis and breast cancer tissue). The products CC of the invention can be used for gene therapy. (A) are used (i) for CC recombinant expression of polypeptides (B) and (ii) to isolate complete CC genes. (B) are used (i) to identify agents suitable for treatment of CC covarian cancer; (ii) directly for treating this form of cancer (CC including expression from gene therapy vectors) and (iii) for generation CC sequence tags) from a particular tissue type before comparison of CC expression patterns. This allows a significantly longer fragment of the gene to be revealed, so should reduce the number of failures associated CC with the fact that BSTs from different libraries may represent different CC parts of the same unknown gene, distorting the estimated frequency of CC cragments encoded by the human ovarian tumor cDNA library derived EST CC fragments represented in AAZ77450-Z77572.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New nucleic acid sequences expressed in ovarian, and some other, cancer tissues, and derived polypeptides, for treatment of ovarian cancer and identification of therapeutic agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human ovarian tumor EST fragment encoded protein 134.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (META-) METAGEN GES GENOMFORSCHUNG MBH.

AAD44636-AAD44676 represent cDNAs corresponding to 28 human secreted CC protein genes, and AAE26959-AAE26999 represent the proteins they encode. AAE2700-AAE27025 represent human secreted protein fragments or their variants. The secreted proteins and genes are useful for preventing, CC treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Specific uses are described for each of the 28 genes, based on the tissues in which they are most highly expressed and include conditions, e.g., by protein or gene CC developing products for the diagnosis or treatment of immunodeficiencies, c.g., x-linked agammaglobulinaemia, B cell immunodeficiencies, severe combined immunodeficiencies, autoimmune disorders e.g., systemic lupus thyroiditis, autoimmune haemolytic anaemia, Goodpasture's syndrome, carythematosus, rheumatoid arthritis, multiple sclerosis, autoimmune the chyroiditis, autoimmune haemolytic anaemia, Goodpasture's syndrome, including septic shock, sepsis, reperfusion injury, inflammatory conditions including septic shock, sepsis, reperfusion injury, inflammatory bowel disease, haematopoietic disorders, respiratory inflammatory bowel disease, crohn's disease, hematopoietic disorders, respiratory inflammatory bowel disease), cancers e.g., gastric, ovarian, lung, inflammatory bowel disease), central nervous system (CNS) disorders e.g., central nervous system (CNS) disorders e.g.,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ruben SM,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC AAD44854-AAD44984 represent cDNAs corresponding to 28 human secreted protein genes, and AAB27097-AAB27137 represent the proteins they encode. CC AAB27138-AAB27164 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, CC treating or ameliorating medical conditions, e.g., by protein or gene CC treating or treatment of disorders fuch as autoimmune diseases (e.g. Cremmatoid arthritis), hyperproliferative disorders (e.g. neoplasms of CC the breast or liver), cerebrovascular disorders (e.g. cerebral ischaemia, CC system disorders (e.g. Alzheimer's disease), infections caused by fungi, CC system disorders (e.g. Alzheimer's disease), infections caused by fungi, CC system disorders (e.g. Alzheimer's disease), infections caused by fungi, CC system disorders (e.g. Alzheimer's disease), infections caused by fungi, CC polypeptides can also be used to aid wound healing and epithelial cell polypeptides can also be used to aid wound healing and epithelial cell polypeptides can also be used to aid wound healing and epithelial cell colliferation, to prevent skin aging due to sunburn, to maintain organs CC before transplantation, for supporting cell culture of primary tissues, CC additives or preservative to increase or decrease storage capabilities, CC additives or preservative to increase or decrease storage capabilities, and other nutritional components. The present sequence represents a human CC secreted protein fragment referred to in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

New human secreted polypeptides and polynucleotides for diagnosing, prognosing, preventing and treating immune, hyperproliferative, liv kidney, reproductive disorders and for identifying modulators of therapeutic use liver,

Disclosure; Page 13; 209pp; English.

cc sequence at least 95 identical to sequence of 28 human secreted corrected.

cc variant, allelic variant, or species homologue, or the encoded sequence concluded in ATCC 97921 and 97922. Also included are the encoding concluded in ATCC 97921 and 97922. Also included are the encoding concluded in ATCC 97921 and 97922. Also included are the encoding concluded in mucleic acids are useful for diagnosing, preventing, prognosing or ameliorating a medical condition e.g. immunodeficiencies (e.g. X-linked agammaglobulinaemia, B cell immunodeficiencies), autoimmune thyroiditis, autoimmune haemolytic anaemia, B cell coodpasture's syndrome, Grave's disease, diabetes mellitus, dermatitis), sepsis, reperfusion injury, inflammatory conditions (e.g. septic shock, concers (e.g. sattric, overian, lung, bladder, liver and concers (e.g. sattric, overian, lung, bladder), liver and concers (e.g. sattric, overian, lung, bladder), liver and concers (e.g. sattric, overian, lung, bladder, liver and concers (e.g. sattricons), inflammation (e.g. hepaticis, gout, trauma, bladder (e.g. hapaticis, gout, trauma, bladder (e.g. sattric), endocrers (e.g. sattric), gout, trauma, bladder (e.g. disorders (e.g. satterial thrombosis), and sattricis, allogenic transplant rejection), blood-related disorders (e.g. endometriosis), infectious disease, concers (e.g. and pancreatic disorders, renal disorders (e.g. addison's disease, and pancreatic disorders, liver diseases and disorders are listed in the specification. They also over the redisted cell livers for useful to enhance or inhibit complement mediated cell lysis, invention relates to an isolated polypeptide comprising an amino acid for

                                             fragment specific for at least one epitope comprising a specified sequence. The applications of the anti HSP90 antibodies include fungal strain growth inhibitor, in the preparation of a diagnostic kit for diagnosing at least one fungal infection and also, in a composition for preparing and for treating fungal infections of human or animal body, caused due to a Candida Cryptococcus, Histoplasma, Aspergillus, Torulopais, Mucormycosis, Blastomycosis, Coccidiodomycosis or Paracoccodiodomycosis organism, resistant to the antifungal agent. The antibody may binds at least one epitope of a fungal stress protein and significantly enhances the efficacy of the antifungal agent against fungal infections, allowing for either lower treatment dosages or more effective treatment at the same dose, which allows for reduction of unwanted side-effects. amphotericin B; heat shock protein; echinocandin antifungal agent;
polyene antifungal agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         stimulating wound and tissue repair, angiogenesis, and the repair of vascular or lymphatic diseases or disorders. They are also useful to prevent hair loss, to modulate mammalian characteristics such as body height, weight, hair colour, and to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors or other nutritional components. The proteins are also useful for identifying binding partners. The present sequence represents a secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention relates to an antibody or an antigen binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2001-663017/76
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (NEUT-) NEUTEC PHARMA PLC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        06-APR-2000; 2000GB-0008305

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy technique to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or
                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antiarthritic, opthalmological and antimicropial activity.

RNAAP antibodies are useful for diagnosis of diseases associated with altered expression or activity of RNAAP. It is used to treat cell proliferative, autoimmune, inflammatory and infectious disorders, like actinic keratosis, bursitis, arteriosclerosis, artherosclerosis, cirrhosis, hepatitis, myelofibrosis, mixed connective tissue disease (MCTD), psoriasis, primary thrombocythemia and cancer, HIV, allergies, rheumatoid arthritis, uveitis, Crohn's disease, and bacterial, viral and

It is expressed in reproductive, nervous and haematopoietic or immune tissues. It has cytostatic, immunosuppressive, keratolytic, antiinflammatory, antiarteriosclerotic, hepatotropic, virucide, neuroprotective, antipsoriatic, anti-HIV, antiallergic, antirheumatic, antiarthritic, opthalmological and antimicrobial activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (HYSE-) HYSEQ INC.

                                                                                                                                                                                            quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving abstrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fip. wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                seq length: 0
